

Be Safe.... Get Off the Tank!

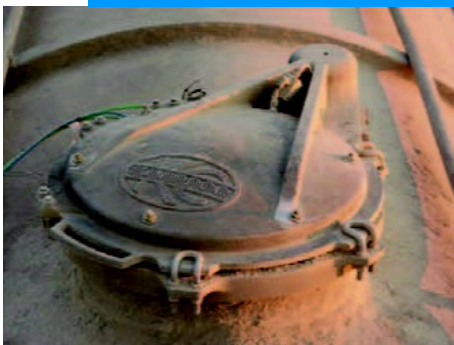

Sly Process Systems introduces the 'SLS' Safe Loading System™ remote powered manhole for dry bulk transports. The opening, closing and sealing of the SLS Manhole is controlled at ground level, eliminating the need for an operator to climb on top of the tank at every loading site. The SLS is specifically designed to operate in the tough dry bulk transportation indus-

try, hauling cement, sand, fly ash and much more. Utilizing the latest in design technology and exhaustive real world testing, the SLS combines simplicity of design for rugged performance and advanced control for dependable operation in this very tough industry.

Be Safe, Get Off the Tank!

- Keeps your operators safely on the ground
- Interactive control reports “what’s happening” on top of the tank
- No welding required for installation
- Retrofits to existing tanks

Specifically designed for tough environments

Sleek design houses functional components “out of harms way”

SAFE LOADING SYSTEM
