

# Have you had your fill of filling chute clogs? VIBCO has a simple solution.

We're the **SILENT** Vibrator Guys.™

## Product Application Bulletin #406 Model BVS-250 Silent Pneumatic Turbine Vibrator

### VIBCO'S SOLUTION

VIBCO Model BVS-250 Silent Pneumatic Turbine Vibrators were mounted onto the rear of each filling chute. The vibration keeps the chutes clear of clogs and allows powder to flow freely, resulting in accurate fills. Production and output has increased dramatically because of the lower rejection rates, and the area remains sanitary.

### VIBCO'S BENEFITS

After installing VIBCO's BVS-250 Silent Pneumatic Turbine Vibrators the customer received the following benefits:

- Dramatically increased accuracy of timed-cycle fills
- Dramatically decreased rejection rates
- Increased daily production and output

BVS-250

### FILLING STATION

Vibrators Mounted  
Behind Chutes

“We were not getting consistent or accurate fills...

Our fill and rejection rates were pretty bad. The fill chutes were constantly clogging, so incorrect amounts of powder were dispensing into the plastic bottles. Even with our timed cycle, the bottles would come off of the fill station under or over filled. Our environment needs to stay sanitary, so the VIBCO BVS-250's threaded exhaust and non-lubricated air power was a perfect match for our needs. I'm happy to report that installing the VIBCO vibrators has completely eradicated the problem. I'll definitely be spreading the word...”

Quality Engineer

Jason G., New Jersey

### Model BVS-250 Silent Pneumatic Turbine Vibrator

- 7,200 VPM at 80 PSI
- 9 CFM at 80 PSI
- 480 lbs of force
- 72 dB at 80 PSI
